

JASPIAR SINGH

510-676-1134 | jaspiarsingh1@gmail.com | Union City, CA | [Linkedin](#) | [Portfolio](#)

TECHNICAL SKILLS

- **Data Analysis:** SQL (BigQuery, MySQL, PostgreSQL), Python (Pandas, NumPy), R, Statistical Analysis, Advanced Excel
- **Visualization & BI:** Tableau, Power BI, Google PLX, Dashboard Automation, RFM Analysis, KPI Dashboard Design
- **Engineering:** ETL Pipeline Design, Data Integrity Auditing, Regression Testing, Git & Version Control
- **Leadership:** KPI Strategy, Stakeholder Management, Budget & Resource Planning, Cross-Functional Team Leadership

EDUCATION

Master of Science in Data Analytics | Eastern University | July 2025

Bachelor of Science in Computer Science | California State University, East Bay | June 2020

PROFESSIONAL EXPERIENCE

Google DeepMind (via Relentless Adrenaline) | Mountain View, CA

Data Analyst & Operations Supervisor | Jan 2022 – Present

Technical Data & Analytics

- Reduced executive reporting latency by 15+ hours per week by architecting 5+ automated ETL pipelines and BI dashboards in custom SQL and Google PLX, enabling leadership to access real-time operational insights without manual data pulls.
- Raised data usability to a consistent 80% threshold by engineering data-integrity auditing scripts in BigQuery to continuously monitor multi-terabyte production logs, eliminating silent data quality failures across LLM research pipelines.
- Contributed statistical validation cited in 3 peer-reviewed publications by quantifying LLM performance on robotics fleets through rigorous success/failure trial analysis, directly informing model improvement decisions.

Leadership & Strategic Operations

- **Strategic Scaling (7x Growth):** Scaled lab capacity 3x and headcount from 20 to 60+ operators by spearheading expansion from 1 to 3 facilities, owning end-to-end infrastructure buildout and hiring to support accelerating research demand.
- **BI & Efficiency:** Boosted operator output by 15% by leading weekly stakeholder KPI reviews that directly shaped budget allocation and timeline forecasting, translating data-driven efficiency roadmaps into measurable throughput gains.
- **Executive Engagement:** Achieved a 100% success rate on high-stakes executive demos by orchestrating rapid-response hardware and software configurations for leadership showcases, building organizational confidence in deploying research systems at scale.

Nuro | Mountain View, CA

Operations Specialist / Command Center Operator | Feb 2020 – Jan 2022

- Maintained a 95% task success rate in high-stakes R&D environments by executing rigorous edge-case testing for autonomous delivery vehicles, accelerating validation cycles for safety-critical system releases.
- Drove measurable improvements in vehicle system uptime by utilizing diagnostic software to troubleshoot performance issues and delivering structured technical feedback directly to engineering teams.

PORTFOLIO PROJECTS

Robotics Lab Operations Dashboard | MySQL · Python · Tableau | [Dashboard](#) | [GitHub](#)

- Designed 5,000-record synthetic robotics dataset; wrote 6 SQL queries analyzing robot performance, failure root causes, operator KPIs, and shift trends across 8 robots and 8 task types.
- Identified R004 and R007 as lowest performers at 63% success rate and Vision Occlusion as the top failure cause (14.6%); built Tableau dashboard replicating real-world lab supervisor workflows.

Customer Segmentation & RFM Analysis | MySQL · Python · Tableau | [Dashboard](#) | [GitHub](#)

- Analyzed 541,909 UK retail transactions; applied RFM scoring (Recency, Frequency, Monetary) via SQL NTILE window functions to segment 4,339 customers into 6 actionable tiers.
- Identified 82% revenue concentration in the UK market and a \$1.16M November holiday spike; executive dashboard surfaced geographic risk and seasonal patterns for strategic planning.

HR Attrition Analysis | MySQL · Python · Tableau | [Dashboard](#) | [GitHub](#)

- Analyzed 1,470 IBM HR records; found Sales Representatives leave at 39.76% — nearly 3x the company average — and overtime employees leave at 30.53% vs 10.44% for non-overtime workers.
- Built composite flight risk scorecard using SQL CASE logic scoring employees across 6 risk factors; Tableau dashboard identified top 20 at-risk employees for proactive HR intervention.

Olist E-Commerce Performance Intelligence | MySQL · Python · Tableau | [Dashboard](#) | [GitHub](#)

- Ingested and analyzed 100,000+ Brazilian e-commerce orders across 7 relational tables using Python ETL and MySQL; wrote 6 business-driven SQL queries covering revenue trends, delivery KPIs, and seller performance.
- Identified 23%+ late delivery rates in AL and MA directly correlated with lower customer review scores; 6-chart executive Tableau dashboard surfaced revenue leakage and logistics bottlenecks.
