

JASPIAR SINGH

510-676-1134 | jaspiarsingh1@gmail.com | Union City, CA | [Linkedin](#) | [Portfolio](#)

TECHNICAL SKILLS

- **Data Analysis:** SQL (BigQuery, MySQL, PostgreSQL), Python (Pandas, NumPy), R, Statistical Analysis, Advanced Excel
- **Visualization & BI:** Tableau, Power BI, Google PLX, Dashboard Automation, RFM Analysis, KPI Dashboard Design
- **Engineering:** ETL Pipeline Design, Data Integrity Auditing, Regression Testing, Git & Version Control
- **Leadership:** KPI Strategy, Stakeholder Management, Budget & Resource Planning, Cross-Functional Team Leadership

EDUCATION

Master of Science in Data Analytics | Eastern University | July 2025

Bachelor of Science in Computer Science | California State University, East Bay | June 2020

PORTFOLIO PROJECTS

- **Robotics Lab Operations Dashboard** | MySQL · Python · Tableau | [Dashboard](#) | [GitHub](#)
- Designed 5,000-record synthetic robotics dataset; wrote 6 SQL queries analyzing robot performance, failure root causes, operator KPIs, and shift trends across 8 robots and 8 task types.
- Identified R004 and R007 as lowest performers at 63% success rate and Vision Occlusion as the top failure cause (14.6%); built Tableau dashboard replicating real-world lab supervisor workflows.
- **Customer Segmentation & RFM Analysis** | MySQL · Python · Tableau | [Dashboard](#) | [GitHub](#)
- Analyzed 541,909 UK retail transactions; applied RFM scoring (Recency, Frequency, Monetary) via SQL NTILE window functions to segment 4,339 customers into 6 actionable tiers.
- Identified 82% revenue concentration in the UK market and a \$1.16M November holiday spike; executive dashboard surfaced geographic risk and seasonal patterns for strategic planning.
- **HR Attrition Analysis** | MySQL · Python · Tableau | [Dashboard](#) | [GitHub](#)
- Analyzed 1,470 IBM HR records; found Sales Representatives leave at 39.76% — nearly 3x the company average — and overtime employees leave at 30.53% vs 10.44% for non-overtime workers.
- Built composite flight risk scorecard using SQL CASE logic scoring employees across 6 risk factors; Tableau dashboard identified top 20 at-risk employees for proactive HR intervention.
- **Olist E-Commerce Performance Intelligence** | MySQL · Python · Tableau | [Dashboard](#) | [GitHub](#)
- Ingested and analyzed 100,000+ Brazilian e-commerce orders across 7 relational tables using Python ETL and MySQL; wrote 6 business-driven SQL queries covering revenue trends, delivery KPIs, and seller performance.
- Identified 23%+ late delivery rates in AL and MA directly correlated with lower customer review scores; 6-chart executive Tableau dashboard surfaced revenue leakage and logistics bottlenecks.

PROFESSIONAL EXPERIENCE

Google DeepMind (via Relentless Adrenaline) | Mountain View, CA

Data Analyst & Operations Supervisor | Jan 2022 – Present

Technical Data & Analytics

- Architected 5+ automated ETL pipelines and BI dashboards using custom SQL and Google PLX; reduced manual reporting latency by 15+ hours weekly for executive leadership.
- Engineered data-integrity auditing scripts in BigQuery to monitor multi-terabyte production logs, improving data usability metrics to a consistent 80% threshold.
- Quantified LLM performance on robotics fleets via success/failure trial analysis; provided statistical validation cited in 3 peer-reviewed research publications.

Leadership & Strategic Operations

- **Strategic Scaling (7x Growth):** Spearheaded expansion from 1 to 3 labs, scaling headcount from 20 to 60+ operators; managed end-to-end infrastructure and hiring.
- **BI & Efficiency:** Led weekly stakeholder KPI reviews directly informing budget allocation and timeline forecasting; efficiency roadmaps boosted operator output by 15%.
- **Executive Engagement:** Orchestrated high-stakes technical demos for executive leadership managing rapid-response hardware/software configurations with a 100% success rate.

Nuro | Mountain View, CA

Operations Specialist / Command Center Operator | Feb 2020 – Jan 2022

- Executed edge-case testing for autonomous delivery vehicles, maintaining a 95% task success rate in high-stakes R&D testing environments.
- Utilized diagnostic software to troubleshoot vehicle performance; technical feedback led to measurable improvements in system uptime.
